## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, drawn to a thin film interleaver, classified in class 385, subclass 16.
- II. Claims 9-17, drawn to a demultiplexer, classified in class 398, subclass 95.
- III. Claims 18-22, drawn to a method of manufacturing a thin film interleaver, classified in class 438, subclass 29.

The inventions are distinct, each from the other because of the following reasons:

Inventions (I and II) and III are related as process of making and product made.

The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the interleaver may be made by another and materially different process, for example, the thin film may be formed transparent substrate or lens by an adhesive while input and reflection fibers may be coupled to abut the substrate or lens by an adhesive or integral formed as a part of the substrate or lens.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does

Art Unit: 2883

not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the details of the demultiplexer of claim 9 are not recited in the combination claim 1. The subcombination has separate utility such as an optical switch or as a pass band filter.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for one of the groups is not required for the other groups, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
